

**2018 Fall**  
**CTP431: Music and Audio Computing**  
**Sound Synthesis (Part 2)**

Graduate School of Culture Technology, KAIST  
Juhan Nam

# Category of Sound Synthesis

- Signal Models
  - Abstract sound synthesis
    - Additive Synthesis
    - Subtractive Synthesis
    - Modulation Synthesis
    - Distortion Synthesis
  - **Sample-based synthesis**
    - **Sampling Synthesis**
    - **Granular Synthesis**
    - **Concatenative Synthesis**
- **Physical models**
  - **Digital Waveguide Model**

# Sample-based Synthesis

- Types of sample models
  - Sampling synthesis: reproduction of the original tone
  - Granular synthesis: sound textures by reorganizing a large set of sample grains
  - Concatenative synthesis: long-term sounds (e.g., speech or music phrase) by stitching short samples from a corpus

# Early Sampling

- Record samples using magnetic tapes

Melotron (1963)

# Melotron

<https://www.youtube.com/watch?v=HdkixaxjZCM>

# Music Concrete

- Music composition genre using recorded samples
  - Use “concrete” samples instead of “abstract” music symbols
- Sample modification by tape editing
  - Cut
  - Splice
  - Reverse
  - Speed up/down: pitch changes

# Music Concrete

<https://www.youtube.com/watch?v=c4ea0sBrw6M>

# Digital Sampling

Fairlight CMI (1979)

<https://www.youtube.com/watch?v=iOIPCpSmhRM>

# Digital Sampling

Synthogy Ivory II Piano (2011) : 77GB+, Steinway D Grand, ...

# Memory Saving Techniques

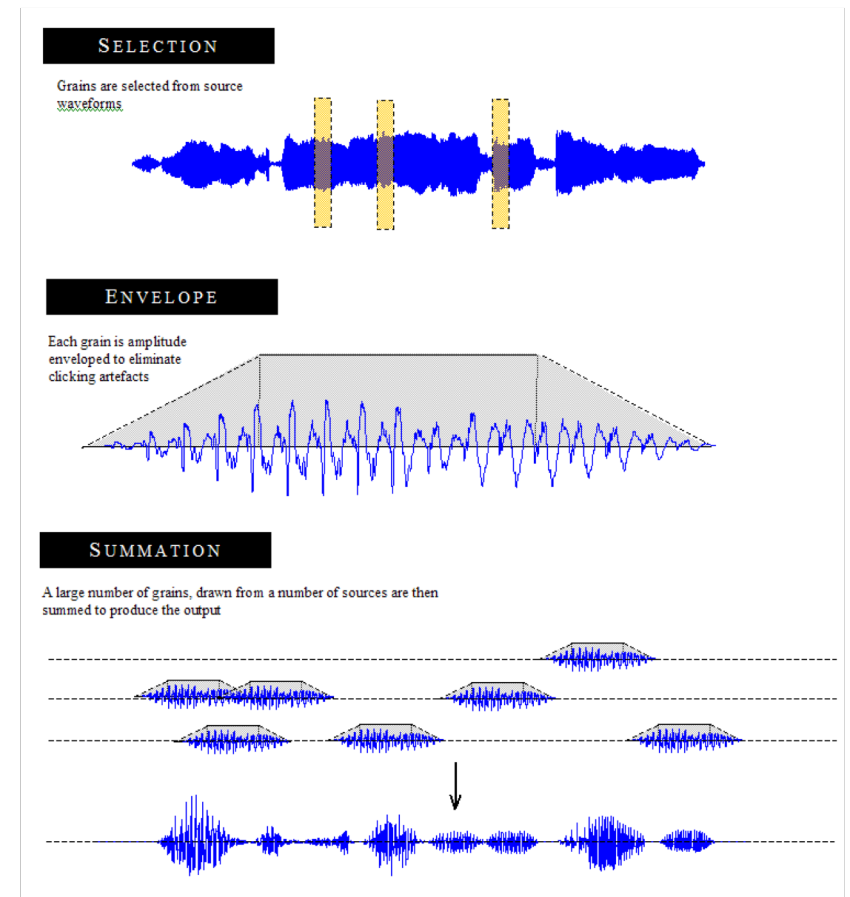

- Looping
  - Repeat a periodic segment seamlessly
  - The sustained part of a pitched musical note
  - Should consider amplitude decays and non-integer period
- Key mapping
  - Reuse a single sample for multiple notes
  - Pitch shifting by re-sampling
- Velocity mapping
  - Reuse a single sample for different velocity
  - Use gain and low-pass filters for soft notes

Synth: One sample for every five keys

# Granular Synthesis

- Take small grains of samples from recorded audio and play them as “a cloud” to generate a sound texture
  - The grain is the quantum of sound
- Parameters
  - Grain size: 1 to 50ms
  - Grain envelope: attack and release time
  - Grain density: overlap

(Williams and Murray-Smith, 2003)

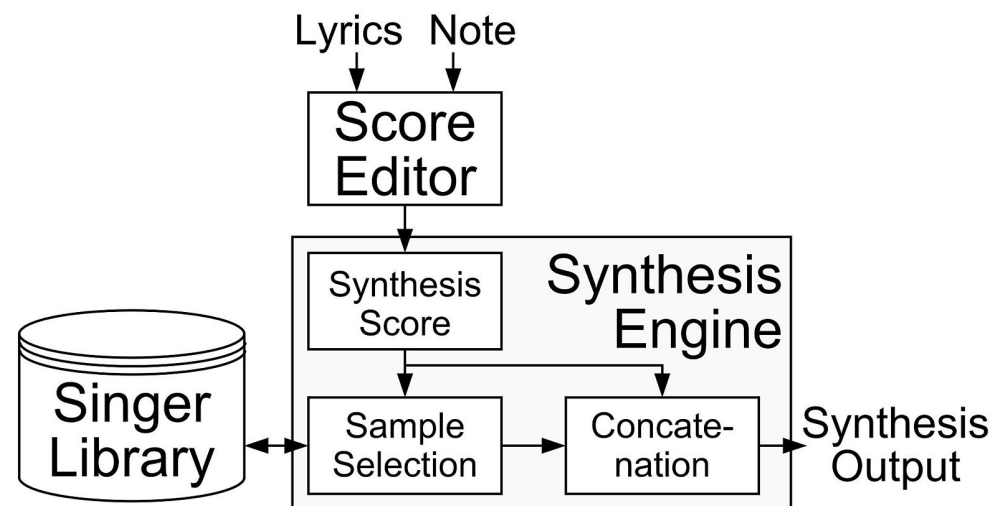

# Granular Synthesis

- Demos
  - <https://www.youtube.com/watch?v=ywK9udx4Svc&t=50s>
  - <https://www.youtube.com/watch?v=Mb4EEWedQKM&t=2s>
- Web audio
  - <http://zya.github.io/granular/>

# Concatenative Synthesis

- Splicing short sample segments from a corpus
  - Unit selections: seamless stitching of samples using input information (e.g., score, lyrics)
- Typically in speech synthesis or singing voice synthesis
  - Speech: phoneme-level, word-level
  - Singing: note-level

Yamaha Vocaloid (Kenmochi and Ohshima, 2007)

# Vocaloid

- Demos
  - <https://www.youtube.com/watch?v=UAtVGHI1AFM>
  - [https://www.youtube.com/results?search\\_query=hatsune+miku](https://www.youtube.com/results?search_query=hatsune+miku)  
(Vocaloid-based virtual singer)

# Physical Modeling

- Model the physical behavior of vibrating objects (i.e., musical instruments)
  - Numerical modeling of wave equations on strings, pipes, membranes
  - Parameters have direct physical interpretations
  - Finger positions on strings, body size

**Wave Equation**

$$K \frac{\partial^2 y}{\partial x^2} = \epsilon \frac{\partial^2 y}{\partial t^2}$$

**Boundary Conditions**

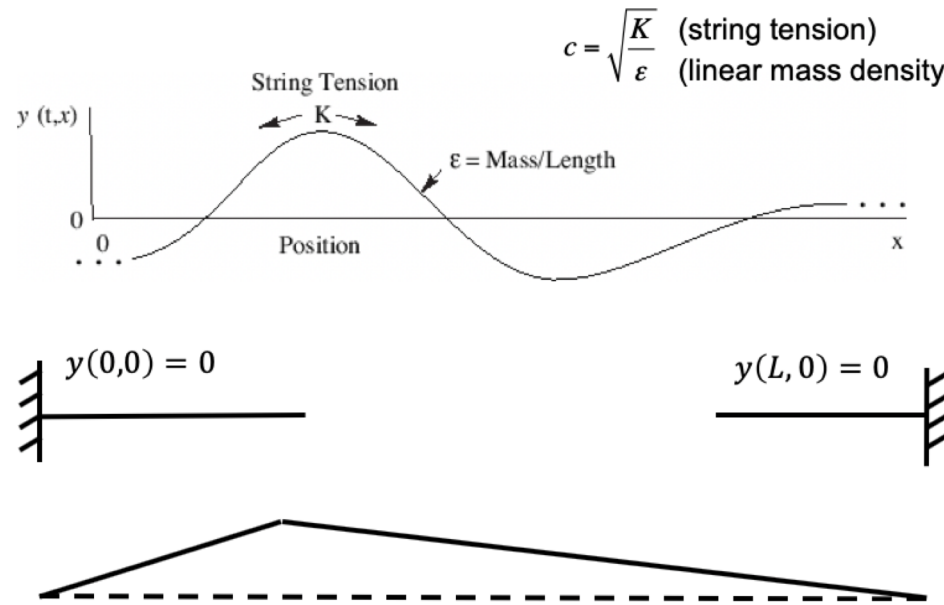

Fixed or open ends

$y(0,0) = 0$   $y(L,0) = 0$

**Initial Conditions**

Action (plucking, striking)

$c = \sqrt{\frac{K}{\epsilon}}$  (string tension)  
(linear mass density)

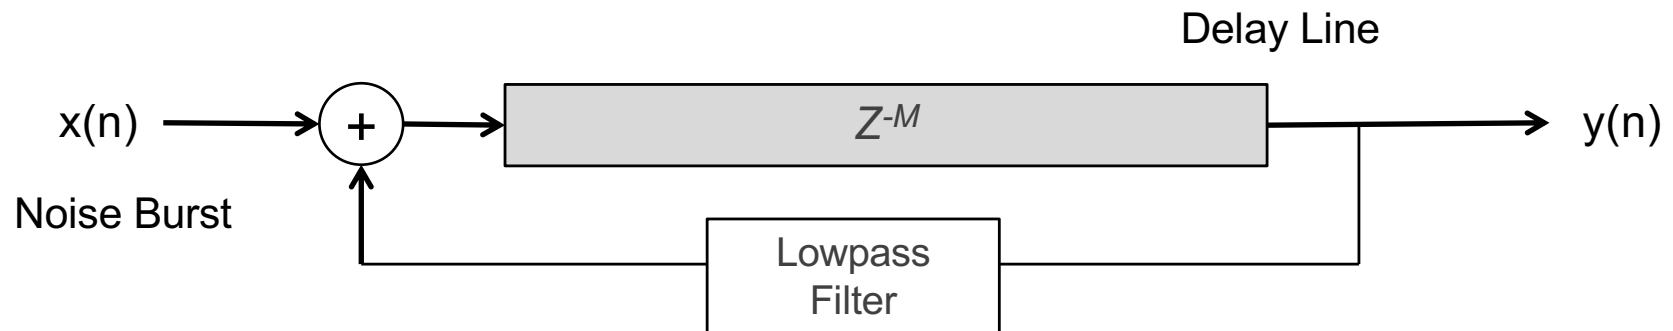

# Physical Modeling

- Waveguide Model
  - With boundary condition (fixed ends)

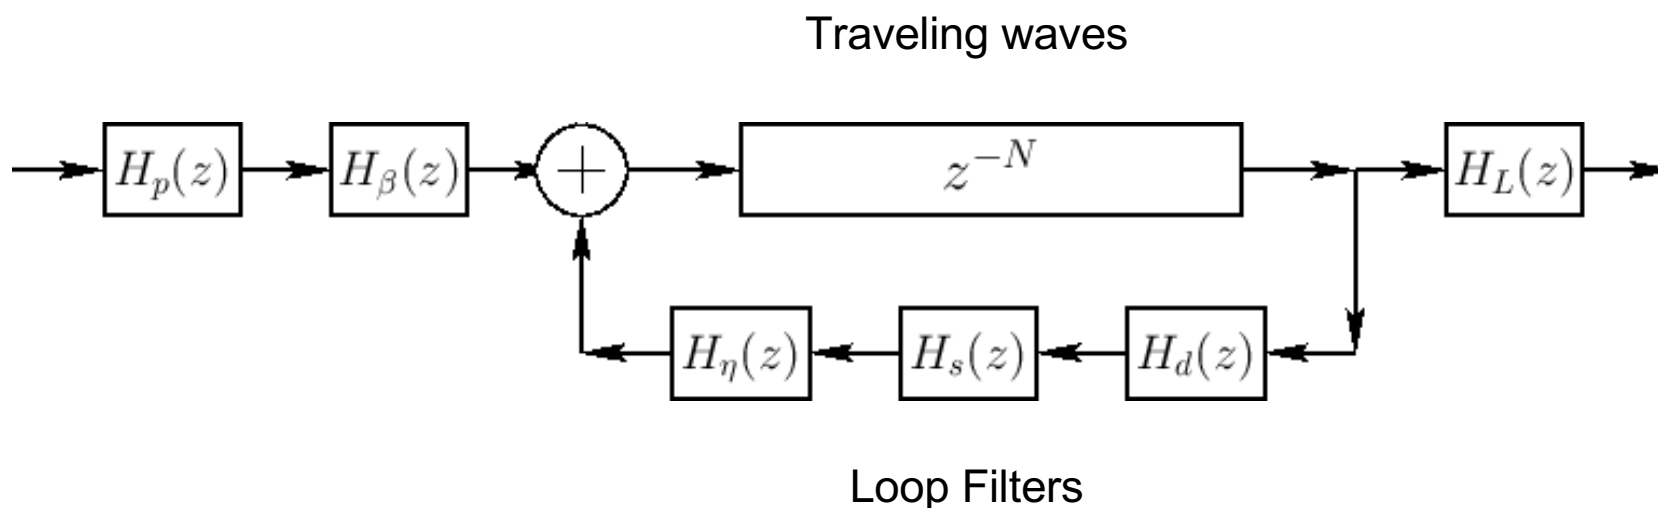

- The Karplus-Strong model

# Physical Modeling

- The Extended Karplus-Strong model

[https://ccrma.stanford.edu/~jos/pasp/Extended Karplus Strong Algorithm.html](https://ccrma.stanford.edu/~jos/pasp/Extended_Karplus_Strong_Algorithm.html)

- Audio Examples

- [https://ccrma.stanford.edu/~jos/pasp/Sound Examples.html](https://ccrma.stanford.edu/~jos/pasp/Sound_Examples.html)

# Comparison of Synthesis Techniques

	Memory (Storage)	Programmability (by # of parameters)	Reproducibility of natural sounds	Interpretability of parameters	Computation power
Additive	**	*****	****	****	****
Subtractive	*	***	**	***	**
Modulation / Non-linear	*	***	**	**	**
Physical model	***	**	****	*****	*** ~ *****
Sample-based	*****	*	*****	N/A	* ~ ***
